## Logitech Corporation Selects Star Analytics' Star Integration Server (SIS)

### *SIS Used as Key Component of Logitech's Financial Systems*

**Palo Alto, CA, August 17<sup>th</sup>, 2006:** Star Analytics, Inc. announces that the U.S. division of [Logitech](#) (NSDQ:LOGI), the leading vendor of personal computer peripherals has selected Star Analytics' Star Integration Server (SIS) to provide a vital component of their Business Intelligence (BI) infrastructure, allowing them to rapidly extract data from their Hyperion Solutions (NSDQ:HYSL) Business Performance Suite of applications for management reporting.

According to Sam Leung, Senior Finance Manager at Logitech, "Star Integration Server is the glue that allows us to bind Hyperion applications to our other financial systems, for both reporting and analysis. Star's product provides us with a seamless, high-performance background channel for our financial data."

The Hyperion BPM™ suite is a key piece of Logitech's financial reporting and analysis strategy, so the powerful capabilities of their Hyperion applications are vital to them.

## Logitech Selects Star Analytics' SIS (page 2)

However, "The Hyperion data is most useful to us when we can get it out and move it exactly where it's needed, when it's needed," said Leung. "Star Integration Server allows us to achieve that goal easily without any complexity."

Leung was already familiar with Star Integration Server from his previous role as Finance Manager at another large technology company who have previously purchased the product. "I knew what SIS could do when I came here," he said, "so I knew it was an obvious solution for Logitech."

### About Star Analytics

Star Analytics, Inc., a privately held corporation, is a premier provider of software automation products and solutions that enable companies to use the Hyperion Business Performance Management suite of products more effectively. Star has solved the challenge of sharing Hyperion BPM data with other databases and reporting applications, allowing Hyperion users to unlock the power of their financial systems, extending the use and availability of Hyperion data, essential for real-time planning, uninterrupted applications availability, and strategic reporting.
