Pfizer Selects Star Analytics' Star Integration Server (SIS)

Used as Key Component of Pfizer's Financial Systems

Palo Alto, CA, November 29, 2006: Star Analytics, Inc. is pleased to announce that [Pfizer, Inc.](http://www.pfizer.com) (NYSE:PFE) has selected Star Analytics' Star Integration Server (SIS) as an essential architectural component of their global financial consolidation system, based around the [Hyperion](http://www.hyperion.com) (NSDQ:HYSL) Business Performance Management Suite of applications.

Using Hyperion Financial Management™ (HFM), Pfizer Corporation is able to consolidate their entire worldwide financials in just five days, and extract and update the consolidated results into their financial data warehouse overnight to satisfy their required corporate reporting standards. According to Shami Reddy, Senior Business Analyst, "With the enormous volumes of data in our global consolidated data set, using Star Integration Server was the only way we were able to perform the extractions from HFM in the required time window. Star Analytics worked closely with us and our Hyperion consultants, Decision Support Technologies (DST) to ensure a successful implementation."

Pfizer Selects Star Analytics' SIS (page 2)

Just as consolidating the data in HFM is a key part of Pfizer's financial consolidation strategy, getting that consolidated data into their financial data warehouse is essential to their corporate reporting requirements. "We needed to have our worldwide results available quickly and accurately in the data warehouse," said Reddy. "Star Integration Server proved to be the ideal way to make that happen."

About Star Analytics

Star Analytics, Inc., a privately held corporation, is a premier provider of software automation products and solutions that enable companies to use the Hyperion Business Performance Management suite of products more effectively. Star has solved the challenge of sharing Hyperion BPM data with other databases and reporting applications, allowing Hyperion users to unlock the power of their financial systems, extending the use and availability of Hyperion data, essential for real-time planning, uninterrupted applications availability, and strategic reporting.
